

### Sail numbers

#### Sail numbers fitting instructions

First ensure that the numbers and letters are correct.

Then ensure that they are positioned correctly.

As shown in the illustration, the national letters on the starboard side of the sail should be closer to the luff than those on the port side, and numbers on the starboard side of the sail must be above numbers on the port side.

#### Sail measurement bands

Your mast should be supplied with the marks prescribed by CR 3.5.2.7(c): that is, with the lower edge of Band 1 and the upper edge of Band 2 permanently marked.

You must ensure that the bands are clearly visible while racing.

CR 6.5.4 defines that the sail measurement band on the sail shall also be permanently fixed.

If tape is used, it must be stitched, preferably with at least two stitches through the tabling.
